

BENEFIT OPTION & RULE CONFIGURATION

Smartchoice Benefits

Make benefit design easier to administer.

Organise covered services, benefit packages and assessment rules in a configurable environment. Smartchoice Benefits helps medical scheme administration teams maintain the rules that support benefit assessment across selected options.

WHAT YOUR TEAM CAN DO

Benefit packages and associations

Create and group benefits, reuse benefit definitions and associate packages with the relevant beneficiary groups.

Dates, limits and priorities

Maintain effective dates and end dates, accumulation periods and benefit priorities where coverage overlaps.

How it connects

Connect with Smartchoice Claims and Membership to support eligibility and benefit assessment. Benefits configuration is separate from clinical care management.

Configured for your environment

Validate each option against registered scheme rules and applicable requirements. PMBs, DSP arrangements, medical savings accounts and waiting periods must be expressly assessed, configured and tested where required.

Coverage and cost sharing

Configure covered and excluded services, benefit percentages, co-payments and other member portions within agreed scheme rules.

Code sets and clinical review

Use configurable code sets, including ICD-10, and code groupings. Route selected cases for medical-necessity review and interact with claims processing for benefit determination.

Maintain benefit definitions more consistently as scheme options and operational needs change.
