

CLAIMS VALIDATION & ELECTRONIC DATA INTAKE

Smartchoice Exchange

Improve claim quality before assessment.

Identify data problems before claims reach the assessment engine. Smartchoice Exchange validates and edits incoming transactions using standard and configurable rules, helping teams reduce avoidable rework.

WHAT YOUR TEAM CAN DO

Separate critical and non-critical errors

Reject transactions with critical errors and flag or correct other issues according to configured rules.

Manage files and responses

Review EDI data with field descriptions, manage submissions and import or export claims data through supported formats.

How it connects

Use as a front-end EDI gateway for Smartchoice Claims or an existing core administration platform. It complements claim assessment; it does not determine benefit entitlement by itself.

Configured for your environment

Agree local file formats, clearinghouse or switching interfaces, acknowledgements and correction rules. US HIPAA 837/835/277CA support does not imply a ready-made South African interface.

Check claim data

Validate beneficiaries, providers, dates and codes, and check for duplicates against submission history.

Apply controls across data sources

Filter and clean agreed membership, provider, claim, reference, portal and third-party datasets before they enter connected administration workflows.

Help processing teams receive more complete, consistent data and spend less time on preventable exceptions.
